

PRD — FridgeChef AI (India Version)

1. Product Name

FridgeChef AI

“Cook Smart. Waste Less. Eat Better.”

Alternative names:

- NutriBox AI
 - MealMitra
 - CookKart AI
 - SmartThali
 - PrepBasket AI
-

2. Problem Statement

Urban people (students, working professionals, bachelors, couples) struggle with:

- Deciding what to cook daily
- Buying too many groceries → food waste
- Ordering from [Zomato](#) / [Swiggy](#) repeatedly → expensive + unhealthy
- Lack of time for meal planning
- Buying ingredients in wrong quantities

Current grocery apps deliver products.

Nobody gives “exact ingredients + AI meal planning + zero waste cooking.”

3. Solution

An AI-powered app that:

- Understands food preference (veg/non-veg/vegan/keto/high protein)
- Creates personalized weekly meal plans

- Sends exact measured ingredient packs
- Tracks what is already in your fridge
- Suggests recipes using leftover ingredients
- Auto-orders groceries from partners

Basically:

ChatGPT + Meal Planner + Grocery Delivery + Nutrition Coach

4. Target Audience

Primary:

- College students living in hostels
- Working professionals in metro cities
- Bachelor flats
- Couples with busy schedules

Secondary:

- Gym users (high protein meal plans)
- Diabetic patients
- Elderly people living alone

Cities first:

Bengaluru
Mumbai
Kolkata
Delhi

5. Core Features

A. AI Meal Planner

User inputs:

- Budget ₹2000/month
- Goal → Weight loss

- Diet → Vegetarian

AI creates:

- Breakfast
 - Lunch
 - Dinner
 - Weekly plan
-

B. Smart Ingredient Packs

Instead of:

Buy 1kg tomato

We send:

- 2 tomatoes
- 100g paneer
- 50g spinach
- Exact spices needed

Zero waste.

C. Fridge Scanner (Big USP)

User takes photo of fridge.

AI detects:

- Eggs
- Tomato
- Milk
- Onion

Then suggests recipes.

Example:

“Make Paneer Bhurji. You only need paneer.”

(Computer vision feature)

D. Leftover AI

If food remains:

“2 potatoes + half cabbage”

AI generates recipes.

No waste.

E. Auto Grocery Ordering

Integrate:

[Blinkit](#)

[Zepto](#)

Amazon Fresh

One-click reorder.

F. Nutrition Engine

Track:

- Calories
 - Protein
 - Carbs
 - Sugar
 - Vitamins
-

6. UNIQUE SELLING POINTS (This is the important part)

USP 1 — AI Fridge Camera

Take photo → AI knows what ingredients you have.

No major Indian app doing this well.

USP 2 — Zero Waste Engine

System calculates exact quantity.

Example:

Need 120g onion → not 1kg.

Reduces food waste by 40–50%.

USP 3 — Regional Food AI (Huge advantage)

App supports:

- Bengali food
- South Indian food
- Punjabi food
- Gujarati food
- Assamese food

Example:

User says:

“I am Bengali.”

AI suggests:

- Luchi
- Cholar Dal
- Fish Curry

This is a big India moat.

USP 4 — Budget-Based Cooking

Student says:

“I have ₹1500 for food this month.”

AI creates meal plan.

Massive student market.

USP 5 — Health Mode

For diseases:

- Diabetes
- PCOS
- High blood pressure

AI changes meal planning.

USP 6 — Hostel Mode (Very unique)

For students.

Input:

Hostel has only:

- Induction
- Maggi
- Egg
- Rice cooker

AI makes recipes.

As a BTech student, you should notice this market instantly.

USP 7 — Subscription Boxes

Every Sunday:

Weekly ingredient kit delivered.

Recurring revenue.

7. Revenue Model

Monthly Subscription

Basic → ₹99/month

Meal planning only

Premium → ₹299/month

AI + nutrition + fridge scan

Grocery Commission

Partner with:

[BigBasket](#)

[Blinkit](#)

Take 5–10% commission.

Premium Health Plans

Gym diet plans

₹499/month

Weekly Ingredient Boxes

₹999/month

Recurring revenue.

8. Tech Stack

Frontend:

- React Native
- Next.js

Backend:

- FastAPI
- Node.js

AI:

- OpenAI API
- Gemini API
- Food recognition model (YOLO)

Database:

- PostgreSQL
- Firebase

Payments:

[Razorpay](#)

Cloud:

[AWS](#)

9. MVP (First Build)

Version 1:

- ✓ AI meal planner
- ✓ Budget planner
- ✓ Grocery list generator

- ✓ Recipe generator
- ✓ Subscription

Do NOT build everything.

10. Go To Market

Phase 1:

Target college students.

Example:

Partner with colleges like
Sister Nivedita University

Phase 2:

Influencer marketing.

Instagram food creators.

Phase 3:

Partner with grocery delivery companies.

Why Investors Might Like It

Big market:

- FoodTech
- AI
- HealthTech
- Subscription revenue
- Daily user habit

Recurring usage = good startup.

My suggestion for YOU specifically

Since you already built **Swasthya Mitra / AI healthcare ideas**, combine both.

Better idea:

HealthChef AI

Not just cooking.

It gives diet plans based on health condition.

Example:

- Diabetes → low sugar meals
- PCOS → hormonal diet
- Gym → protein meals

This is stronger than plain FridgeChef.

Health + AI + Food = bigger moat.

That version feels more founder-level than just another meal app. 🚀
